

# ASTRADIS

Automated Specification Tool for AGV Deployment in SMBs

**DURATION:**

06.2021 - 11.2022

**CONTACT:**

Nils Hoppe, M. Sc.  
E-mail: hpp@biba.uni-bremen.de  
Tel.: +49 421 218 50 181

Lennart Rolfs, M. Sc.  
E-mail: rof@biba.uni-bremen.de  
Tel.: +49 421 218 50 184

Christoph Petzoldt, M. Sc.  
E-mail: ptz@biba.uni-bremen.de  
Tel.: +49 421 218 50 199

**POSTAL ADDRESS:**

BIBA – Bremer Institut für Produktion  
und Logistik GmbH  
Hochschulring 20  
28359 Bremen

**Motivation**

The deployment of automated guided vehicles (AGVs) to optimize intra-logistic processes is often difficult for SMEs, as the necessary requested, a tool was developed to support inexperienced users in system planning and selection.

**Approach**

To achieve this goal, a classification scheme for AGVs was developed and a solution catalog was created. For the requirements specification of the AGVs to be used, several process blocks were defined and integrated into a web based guided requirements specification system. In addition, an augmented reality solution was developed to record environmental conditions and define load transfer stations to support this process. To select suitable solutions, a recommendation system was implemented that automatically matches the recorded data and the characteristics of the systems in the catalog. In order to determine the necessary fleet size, a simulation interface was implemented, which allows the recorded and selected data to be converted into a material flow simulation.

**Results**

The developed system enables users to record planning-relevant requirements via a web-based user interface and suggests a selection of suitable systems. The use of the system does not require any significant previous knowledge in the planning of AGVs. This has been proven in user studies. In this way, employees of SMEs are enabled to carry out the initial steps independently, increasing the chance that projects for the deployment of AGVs will be continued beyond the initial phase. The ability to exchange planning data digitally and to automatically derive simulation models reduces the effort and coordination processes between SMEs and AGV vendors can be simplified.

BIBA is an engineering research institute located at the University of Bremen. It is committed to basic research as well as to application-oriented development projects and engages itself in practice-oriented implementations, whereby it relies on cross-national, -institutional and interdisciplinary cooperation and transfer. BIBA always considers the entire value-added chain: from the idea, concept and production, through to the use and the end recycling of a product.
